Many different kinds of injection mechanisms are known in the prior art, and are in use with several different kinds of containers. One kind of injection mechanism is the so-called plunger-type mechanism, in which an elongated plunger is reciprocated by a hand wheel or foot pedal. For example, U.S. Pat. No. 2,973,985 to Farkas discloses such an arrangement. U.S. Pat. Nos. 3,392,980 to Bea et al., 4,440,006 to Felts, 4,343,670 to Leung, and 4,459,582 to Lyon, Jr., disclose other types of plunger-type mechanisms. In addition, the prior art includes so-called pinchcock-type mechanisms, in which an elastomeric sealing element is pierced by a piercing element. For example, U.S. Pat. Nos. 2,950,118 to Rogers, Jr. and 2,946,905 to Kohler et al. disclose such arrangements. Still another type of injection mechanism is the "push-to-inject" mechanism, in which a user grasps a cartridge containing a quantity of a fluid and inserts the cartridge into a body of a recipient, whereupon the user grasps a plunger and presses it outwardly. For example, U.S. Pat. No. 3,449,968 to Joy discloses such a mechanism. Injection devices can be relatively complicated and costly, and some of the known devices are fairly bulky. In addition, certain ones of the known devices require two hands to operate, and some of the known devices are awkward or difficult to manipulate to effect a desired injection.New Custom Wood Baby Shower Invitations So you have an adorable couple and they want to have a custom wood baby shower invitation design? Nursing theory. This article has raised the question of whether the assumptions and values inherent in nursing practice theory are relevant to scientific theory. It has shown how theory differs from practice and has suggested that practice theory offers an opportunity for the nursing theorist to reflect on the implicit value judgments that serve as the foundation for nursing practice. The validity of nursing practice theory has been questioned by theorists who believe that theories which are based on hypotheses, rather than on inductive and deductive processes, should be viewed with skepticism. This conclusion is acknowledged. The validity of nursing practice theory cannot be assessed by any systematic means. But the value of doing so is suggested. The thesis that this article makes is that the role of the nursing theorist should be to help nurse researchers, regardless of their discipline, generate their own vision of how nursing problems should be solved through the use of nursing practice theory. Implicit value judgments, such as the one which favours persons in need, continue to guide the nursing profession, directly or indirectly. The theory that enables these implicit values to be identified and analyzed is the nurse theorist's tool.Q: Where does the catch phrase "Any ideas?" come from? When I was younger, I used to tell people I was looking for ideas on the Internet in order to give them something to do on the side. After a few years and a lot of internet research, I came across this particular phrase: Any ideas? Is this perhaps a relatively recent expression (in the last 2 or 3 decades) which was adopted from scifi culture? If not, what is the etymology of this phrase and does it make any sense? A: According to The American Heritage® Dictionary of the English Language, Fifth Edition by Houghton Mifflin Company, the phrase is not new. a. Expression of ready acknowledgment b. Ideas to use c. Finding or offering ideas. So, there seems to be a history of the question "Any ideas?" that dates back to the 1950s. The idea of a helpful

suggestion, of course, is thousands of years old. A: It is not actually new in the contemporary sense. From the Online Etymology Dictionary: [Middle English aynide] → [aide]
